

## **PhD positions in Reconstructing Sea-Level Change**

The Asian School of the Environment (ASE) and Earth Observatory of Singapore (EOS) at Nanyang Technological University, Singapore invites applications for graduate scholarships (PhD level) in coastal evolution/Quaternary environmental change. This project is part of an ongoing program of field-based and computational research to reconstruct Quaternary sea levels and to apply the paleo-record to improve projections of future sea-level change.

For field-focused candidates: skills in micropaleontology/paleoenvironmental reconstructions and/or sedimentology of coastal systems are highly desirable.

For computationally-focused candidates: a strong numerical or statistical background is highly desirable. Applicants able to participate in both field and computational research are particularly encouraged.

Graduate Scholarships include a competitive stipend, tuition and benefits, and are 4 years in duration. Interested students should apply following the instructions at <https://admissions.ntu.edu.sg/graduate/R-Programs/R-WhenYouApply/Pages/R-HowtoApply.aspx> indicating an interest in working with Ben Horton in their application.

For further information, please contact Professor Benjamin Horton [[bphorton@ntu.edu.sg](mailto:bphorton@ntu.edu.sg)]
